

Axonometry - Part of The university square are also two water elements on east and west side. They are part of water system and they are connected to water tanks down below the „inside“ square. There is also a public toilet inside a small cabin and comfortable furniture ready to use. Lights in a place are made by lamps inspired by people-made formations from Sokol festivals. Last but not least there are two big arcades creating new kind of protected space that is nice to use in rainy days for example.

Detail of vegetation

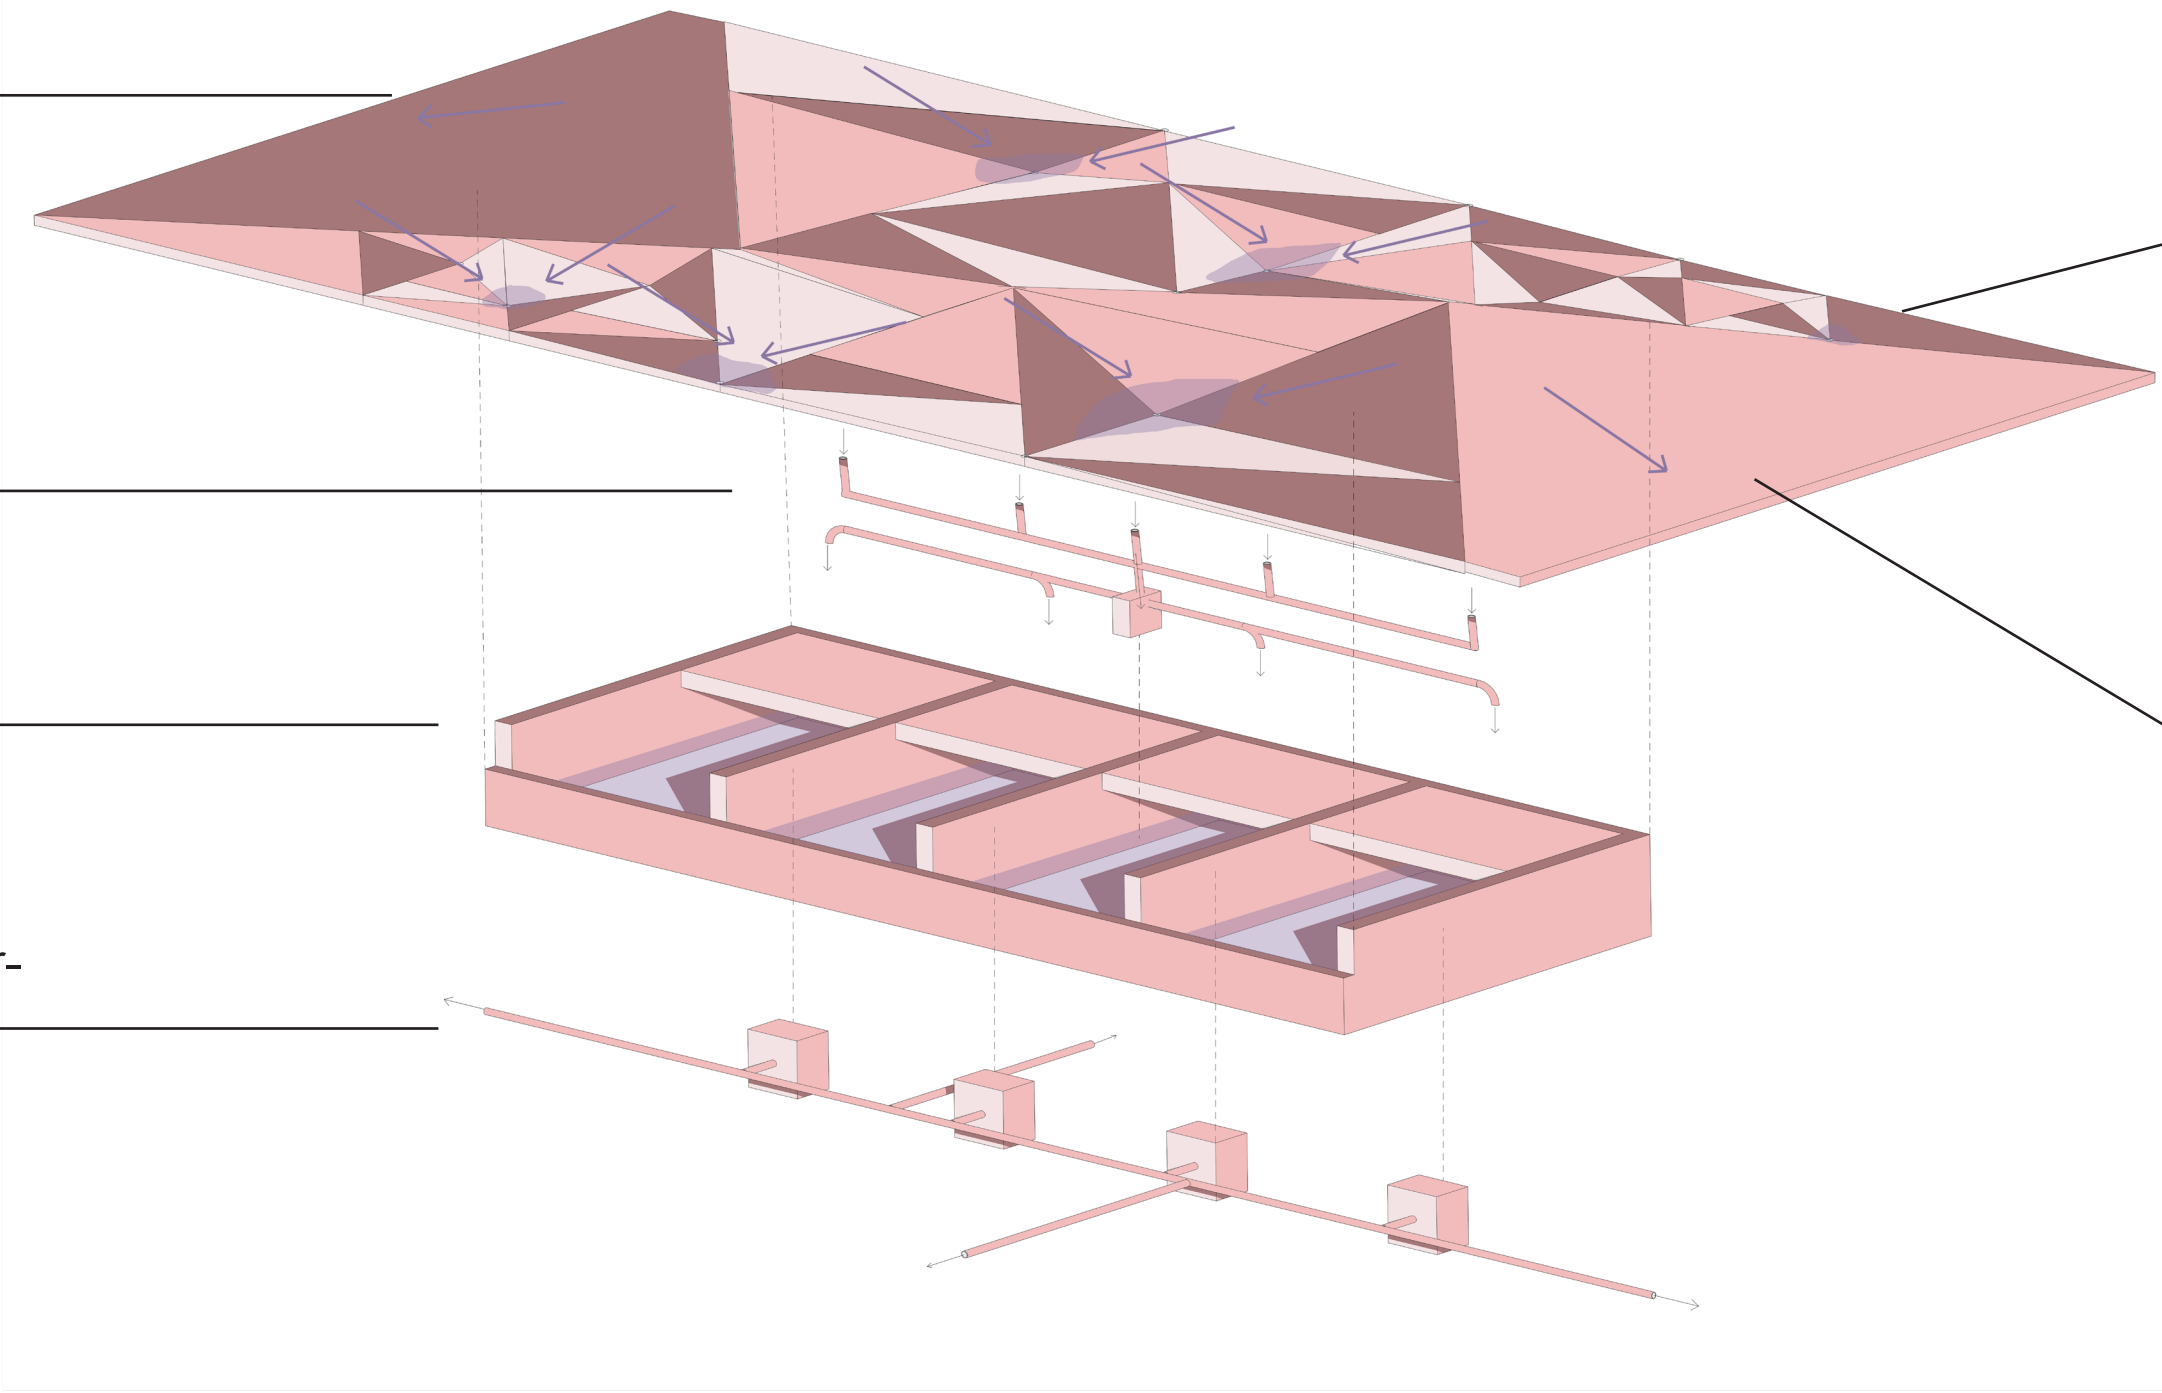

The deck this upper part of inside square is supposed to collect water because of its triangle shapes with 2° angles.

collect pipes with filters

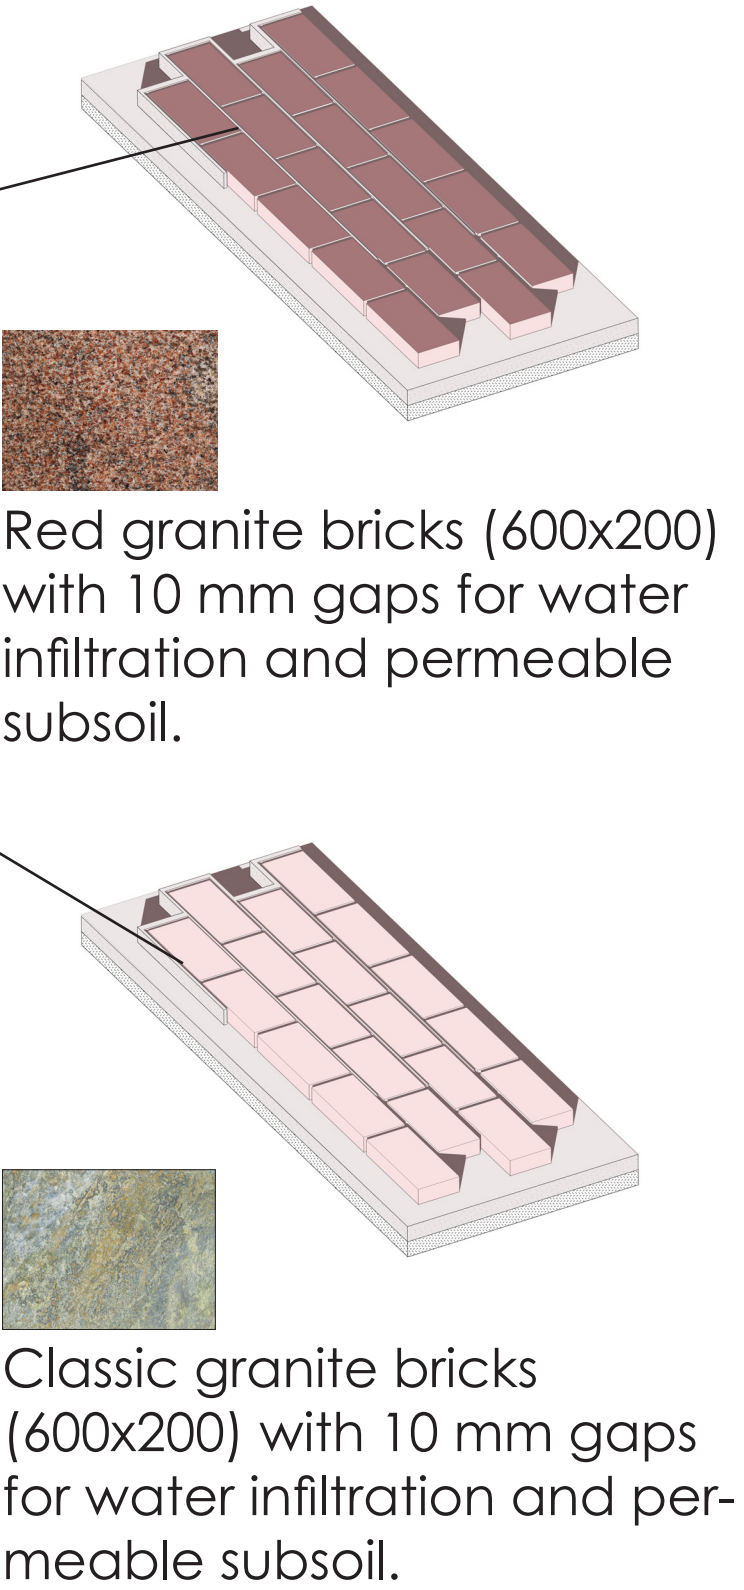

water tanks

pumps with a distribution pipes
